Dr. Robert Jay Rowen's

SECOND OPINION

Vol. XX, No. 1 January 2010

Cure the Flu and Other Infections in Minutes

I'm sure by now you're tired of hearing about the swine flu, vaccines, and all the controversy surrounding the vaccines. While the swine flu has been rough on some people, even killing people, many with pre-existing conditions, the outbreak hasn't been nearly as bad as expected. I'm thankful for that.

However, regardless of whether it's the swine flu, avian flu, or some other strain, influenza strains still pose a serious threat. And, as I've said in the past, I do expect a major worldwide pandemic in the near future. So finding an easily accessible cure from an integrative physician is vital. And I've found that cure.

Dr. Tom Levy recently sent me a report on a serious swine flu case. With a simple intravenous treatment, a physician cured his patient of swine flu quicker than anything I've ever seen. Any time I think of a rapid flu cure administered intravenously, I think of hydrogen peroxide, which is a wonderful treatment for the flu. But this cure was even more impressive.

How was this flu cured so effectively? By using intravenous vitamin C. And it's a fabulous story.

Doug is a Waikato farmer from New Zealand. He recently went to Fiji on holiday. While there, he came down with flu-like symptoms, but planned to tough it out. When he returned back to New Zealand, he was real sick. He went to his local hospital, but the staff was unable to help him. So they sent him to a major hospital in Auckland.

Now you can imagine what happened in Auckland. The doctors immediately prescribed the Pharma drug

Tamiflu, and the usual antibiotics. He was still deteriorating and ended up on life support. Doug's brother-in-law knew about vitamin C (ascorbic acid) and contacted Dr. Levy. Dr. Levy referred Doug to an integrative physician. The new doctor provided lots of information on intravenous vitamin C (IVC). So the family pushed the hospital to provide IVC. And, of course, the hospital refused.

Integrative doctors pressed the hospital to try IVC. The hospital staff told the family there was nothing more they could do and that they would soon turn off the life support. His lungs were not functioning (this is typical in fatal influenza). The family vigorously objected to turning off life support until the hospital tried everything — including IVC. They pushed the hospital to give the treatment a chance. The hospital finally, but reluctantly, agreed.

The nurse administered 50 grams twice daily and told the family that if there was no improvement in four days, they would switch off life support. He showed improvement after just two days. The staff at the hospital was shocked. But they were still concerned. The conventional doctors expressed concern about his kidneys from the vitamin C. However, it wasn't his kidneys that struggled. It was his liver, which began to fail. The doctors, of course, blamed the IVC.

An integrative physician quickly pointed out that a much more likely cause was the antibiotics. The patient improved to the point where they could transfer him to a hospital closer to home. But he was still on a ventilator and a feeding tube.

The local doctors were more receptive to the IVC. However, they still wouldn't agree to the higher doses he needed. The family got a lawyer involved. He wrote a letter and called the hospital regarding patient rights and suggested that they sort it out with the family or face serious consequences.

The hospital continued IVC at lower doses, while an integrative doctor recommended much higher doses. Doug continued to recover. When he finally woke up, he thought he had been hospitalized for only three days. But he had been there for eight full weeks.

The hospital staff was stunned, never seeing a recovery like this. And the family was absolutely blown away. They still have a father and husband in their lives!

So, is this really that unusual? In orthodox medicine, which has virtually NO ability to treat viruses, this is absolutely unheard of. But not in alternative medicine.

We see this type of recovery regularly.

In fact, Dr. Levy's written a book about his success using IVC. In his book, Dr. Levy details the incredible pioneering work of Dr. Fred Klenner from the 1960s. I've told you in past issues about Dr. Klenner's amazing treatment of shingles with vitamin C. As you may know, most people consider vitamin C (ascorbic acid) an antioxidant. However, Klenner discovered properties of vitamin C that, to this day, nearly all orthodox physicians are unaware of. And his use of vitamin C goes way beyond shingles.

"Ascorbic acid has many important functions," says Dr. Klenner. "It is a powerful oxidizer and when given in massive amounts; that is, 50 grams to 150 grams, intravenously, for certain pathological conditions, and 'run in' as fast as a 20 Gauge needle will allow, it acts as a 'Flash Oxidizer,' often correcting the pathology within minutes.

"Ascorbic acid is also a powerful reducing agent. Its neutralizing action on certain toxins, exotoxins, virus infections, endotoxins, and histamine is in direct proportion to the amount of the lethal factor involved and the amount of ascorbic acid given. At times it is necessary to use ascorbic acid intramuscularly. It should always be used orally, when possible, along with the needle."

Klenner recognized that in massive amounts, ascorbic acid actually acts as an oxidant, killing pathogens. It can neutralize toxins and poisons. And, he proved it.

In his papers, Klenner described how a viral pneumonia could spiral into a breakdown of the blood-brain barrier and cause a life-threatening encephalitis (brain inflammation). Mortality was high. Klenner used massive doses of IVC. The result? ALL of his patients recovered.

Klenner also reported on a case of severe mononucleosis. "In one patient who was given the last rites of her church, the girl's mother [a nurse] took things into her own hands when the attending physician refused to give ascorbic acid. In each bottle of intravenous fluids, she would quickly 'tap in' 20 to 30 grams of vitamin C. The patient made an uneventful recovery."

In another case, Klenner treated a patient with viral pneumonia. The patient was unconscious and had a fever of 106.8°F. The doctor gave the patient 140 grams of vitamin C over a period of 72 hours. By the end of those 72 hours, she was awake, sitting up in bed, and taking fluids freely by mouth. Her temperature was normal.

Klenner reported on a spectacular recovery of a 3½-year-old girl in a coma from a black widow spider bite.

She demonstrated signs that no one had ever recovered from. She received IVC and quickly recovered.

Klenner reported on recoveries from tetanus, infectious heart inflammation, sunburn, thermal burns, chicken-pox, nausea, and even trichinosis.

What's great about vitamin C treatment is that any doctor or hospital can do it — if they're willing. No regulatory agency can interfere — or come after the doctor for using it. IVC is incredibly safe. I have personally administered at least 10,000 treatments over 20 years.

Unless you eat a diet like mine, I do suggest that you consume at least 1,000 mg of vitamin C daily. You'll find that much in most high-quality multivitamins.

At the first sign of illness or exposure to infection, increase your intake to at least 1 gram per hour while awake. If you get loose stools, reduce the dose and build it back up slowly. If you develop significant symptoms of viral illness, see your integrative physician promptly. Time is of the essence. And many people recover dramatically even BEFORE the IV is over. To locate your nearest integrative physician, see page 7.

Please pass this report on to your friends and relatives. With a deadly pandemic quite possible, this information can be lifesaving. If you'd like more information on IVC, check out Dr. Levy's book, *Curing the Incurable: Vitamin C, Infectious Diseases, and Toxins*. It's available at Amazon.
